

StellarMind

Empowering Businesses with **AI-Driven** Intelligence

We work with startups, small-mid sized company and fortune 500+ companies.

<https://stellarmind.ai/>

About StellarMind

Founded in 2020, we are an ISO 9001-certified, forward-thinking company driving the future of IT with cutting-edge solutions. With a team of 40+ skilled professionals based in India, we specialize in transformative technologies including AI/ML, IoT, AR/VR, Cloud, Mobile, Web, Blockchain, Metaverse, and RPA.

Mission

Our mission is to drive digital transformation by delivering smart, scalable solutions in AI, ML, IoT, automation, and full-stack development—empowering businesses to innovate, optimize, and grow through data-driven technology.

Vision

Our vision is to lead the AI driven future by integrating smart technologies into everyday life and business driving innovation, enabling transformation, and creating lasting value for people, industries, and the planet.

Values

Our core values innovation, integrity, agility, client partnership, excellence, data driven thinking, responsible technology, and continuous learning guide us in delivering impactful, future-ready solutions.

Industries **We** Serve

StellarMind's cutting-edge AI solutions are tailored to address the unique challenges and opportunities across a spectrum of vital sectors.

AI-Powered Gameplay Analysis System

Playformance is a next-generation esports platform designed to help players, coaches, and teams unlock their true potential through data-driven insights. We built an AI-driven esports analysis platform that processes gameplay recordings using computer vision and OCR to deliver coach-like feedback, reduce manual review by 70%, and help players improve accuracy, strategy, and overall performance.

Demo Video: [Click here](#)

Key Deliverables:

- AI-Powered Gameplay Analysis
- Computer Vision & OCR Event Detection
- Coach-Like Insight Engine
- Modular & Scalable Multi-Game Support
- Performance Tracking & Data-Driven Improvement

Technologies

Smart Medical Waste System

Safety and Compliance Monitoring

Designed to detect non-compliant medical waste disposal events using IoT sensors and edge-based computer vision.

-  **Absolute Privacy:** No video recordings, facial data, or personal identifiers are stored or transmitted.
-  **Speed:** End-to-end latency of less than 1 second from drop to log.

Key Deliverables & Technology - Smart Medical Waste System

Key Deliverables:

- Edge AI-powered waste detection unit
- IoT-based vision & fill-level sensors
- Edge computing (Raspberry Pi + TPU)
AI waste classification engine
- Safety & compliance monitoring
- Privacy-first system design
- Real-time alerts & notifications
- Analytics dashboard

Technologies

Herman App - AR Storytelling Application

Herman App is an immersive AR storytelling application designed to engage children in interactive learning. It features AI-powered NPCs that simulate human-like conversations and fun activities, making storytelling more engaging. The app includes phonetics-based gameplay, helping kids select and pronounce words while improving language skills. Additionally, an interactive narrator guides children through stories, assisting with reading and comprehension in an enjoyable way.

Demo Video: [Video 1](#), [Video 2](#)

Key Deliverables:

- AR Storytelling App
- AI-powered NPCs
- Phonetic Gameplay
- Interactive Narrator
- Customizable Learning Paths

Technologies

Herman App – **Beyond Children's** Storytelling

Healthcare & Therapy

Cognitive therapy, speech rehabilitation, and patient engagement through gamified storytelling.

24

Retail & Marketing

AR brand experiences, product demos, and interactive campaigns to engage customers.

Corporate Training

Scenario-based learning, soft skills development, and onboarding simulations.

Museums & Cultural Experiences

Immersive tours, historical storytelling, and interactive exhibits.

Entertainment & Gaming

AR-driven narrative games, interactive comic experiences, and immersive world-building.

Education & eLearning

Interactive lessons, language learning, and virtual labs for students of all ages.

Amul **Dispatch Intelligence**

Amul's scale demands a shift from manual spreadsheets to an AI-augmented Truck Load Builder (TLB). A Predictive Primary Distribution System applies AI to forecast demand and optimize union-to-branch allocations. Smart Allocation recommends precise SKU mixes (e.g., 320 ST of Butter vs 200) based on real-time union availability. Impact: Faster union-branch alignment and a measurable reduction in spoilage.

Key Deliverables:

- Instant Root Cause Analysis
- Routing: Temp- & delay-aware
- AI Q&A: Ask risks instantly
- Data: Read-only SAP/TLB
- Security: On-prem, encrypted

Technologies

FMCG Sales **Data Pipeline**

A centralized data integration solution enabling near real-time synchronization across multiple FMCG systems. The architecture eliminates data silos, ensures consistency, and supports faster, data-driven decisions. The solution also powers real-time dashboards for business and leadership teams.

Key Deliverables:

- Data Synchronization
- ETL Pipelines
- Data Staging
- Data Transformation
- Structured Storage
- BI Dashboards

Technologies

Casino Analytics

A scalable analytics solution built to ingest and process large volumes of casino and online player data. The platform enables deep insights into player behavior and engagement while maintaining strict data security and regulatory compliance. Designed to support data-driven decisions for improving player experience and retention.

Key Deliverables:

- Data Ingestion
- Data Pipelines
- Behavior Analytics
- Scalable Processing
- Data Security
- Data Governance

Technologies

django

Seryna AI – Voice AI for Real-Time Emotional Support

We developed an emotionally intelligent, voice-interactive AI companion that combines LLMs, semantic retrieval, and real-time speech pipelines to deliver empathetic, context-aware support for users experiencing stress, anxiety, or loneliness.

Demo Video: [Video 1](#), [Video 2](#)

Key Deliverables:

- Voice-Interactive Emotional AI Companion
- FAISS-Powered Semantic Retrieval Engine
- Context-Aware Response Generation (LLaMA-3)
- Real-Time Speech-to-Text & Text-to-Speech
- Secure API Deployment for Web & Mobile
- Scalable Platform for Wellness & Coaching Applications

Technologies

Powering **Multiple Industries**

Healthcare & Therapy

Supports mental health, counseling, and patient check-ins.

Corporate Wellbeing

Employee stress monitoring, wellness coaching, and burnout prevention.

Education

Assists students with stress management, learning support, and mentorship.

Customer Service

Provides empathetic, real-time assistance for clients, enhancing CX.

Elderly Care & Assisted

Offers companionship, daily reminders, and emotional engagement.

Personal Productivity

Guides mindfulness, habit formation, and motivation through voice interactions.

Vakta.tech – Voice-Enabled AI Agents for Every Business

Vakta.tech, a next-generation voice AI platform that enables businesses to create intelligent voice assistants capable of understanding, responding, and learning from real conversations. Vakta.tech empowers organizations to deliver natural, human-like voice interactions — transforming customer engagement and automating communication across channels.

Demo Video: [Click here](#)

Key Deliverables:

- Voice-Interactive AI Agents for Real-Time Conversations
- Personalized Business Training from Custom Knowledge
- Real-Time Speech-to-Text & Text-to-Speech
- Human-Like Speech Recognition and Response
- Unified Web + Voice AI Platform

Technologies

Applications **Across** Industries

Customer Support

Real-time voice agents for instant, human-like customer interaction.

Banking & Finance

Voice assistants for secure, personalized financial support.

Healthcare

AI voice agents for appointment scheduling and patient queries.

E-commerce & Retail

Voice-based product search, order tracking, and recommendations

Enterprise IT

Voice automation for IT helpdesk and internal workflows.

SMEs & Startups

Custom voice AI agents for 24/7 customer engagement.

SOC 2 Report **Automation with AI**

We developed an AI-powered platform that automates SOC 2 report analysis using LLMs, semantic retrieval, and structured preprocessing—delivering consistent, explainable, and scalable compliance evaluations across frameworks like ISO 27001, HIPAA, and GDPR.

Demo Video: [Video1](#), [Video2](#)

Key Deliverables:

- AI-Powered SOC 2 Report Evaluation
- Semantic Retrieval & Embedding Pipeline
- LLM-Based Scoring with Mistral-7B
- Trust Services Criteria (TSC) Categorization
- Transparent, Explainable Justifications
- Scalable Enterprise-Ready Compliance Automation

Technologies

Compliance **Intelligence** Across Industries

Finance & Banking:

Automates audits, risk assessments, and regulatory reporting.

Healthcare: Streamlines

HIPAA compliance checks and patient data security audits.

Enterprise IT

Evaluates ISO 27001, GDPR, and internal security controls at scale.

Manufacturing & Supply Chain

Monitors operational compliance and safety standards.

Retail & E-commerce

Ensures PCI DSS, data privacy, and vendor compliance efficiently.

Cross-industry Governance

Generates explainable reports for internal audits, regulatory reviews, and certifications.

AIVA – All-in-One Smart Home AI Assistant

We built AIVA, an edge-powered AI assistant that combines computer vision, voice recognition, and behavior modeling on low-power hardware to deliver privacy-first, real-time smart home automation with seamless integration across IoT devices.

Demo Video: [Video1](#), [Video 2](#)

Key Deliverables:

- Edge-Powered AI Smart Home Assistant
- Computer Vision & Voice Recognition
- Reinforcement Learning
- Privacy-First Real-Time Automation
- IoT Integration via Home Assistant
- Custom Embedded Hardware & Mobile App

Technologies

AIVA – Beyond Smart Homes

Smart Offices

Automates environment & meetings through vision + voice.

Healthcare

Monitors patient safety, assists with reminders & alerts.

Manufacturing

Ensures safety compliance, predicts maintenance needs.

Education

Tracks engagement, automates attendance, aids teachers.

Retail & Hospitality

Personalizes customer experience, automates operations.

Automotive

Enables driver recognition, fatigue detection & voice control.

Stock Advisor App – AI-Powered Investment Insights

An intelligent stock advisory application that analyzes market data, integrates trusted ratings, and provides clear, reasoning-backed recommendations—helping investors make smarter, real-time decisions.

Demo Video: [Click here](#)

Key Deliverables:

- AI-Driven Stock Analysis & Recommendations
- Real-Time Market Intelligence
- Integrated Ratings from Trusted Sources
- Access to Latest Financial Articles
- Transparent, Reasoning-Based Insights

Technologies

Fullstack React

Flask

Applications **Across** Industries

Finance & Investment:

Real-time stock, crypto, and portfolio recommendations.

Banking & Wealth Management

Personalized financial planning, risk analysis, and asset allocation.

Corporate Strategy

Market trend analysis, competitor insights, and strategic decision support.

E-commerce & Retail

Dynamic pricing, inventory forecasting, and demand prediction.

Energy & Commodities

Predictive analytics for trading, supply-demand forecasting, and risk management.

SMEs & Startups

Financial health insights, investment readiness scoring, and growth projections.

AI-Powered Interior Design

Interior Design: Scan an empty room with a mobile LiDAR sensor. Select options like a sofa, bed, or paint color. In just a few seconds, our AI generates a stunning 3D image, helping you visualize your dream space instantly.

Demo Video: [Click here](#)

Key Deliverables:

- Mobile LiDAR Room Scanning
- Real-Time 3D Generation
- Virtual Furniture & Paint Staging
- Personalized Design Recommendations

Technologies

AI-Driven Building Information Modeling (BIM) Data Summarization

This project takes in IFC files and provides easy to understand summary using AI. This can highlight project features, missing metadata that are often not added as mistake, etc.

Demo Video: [Click here](#)

IFC Metadata Analysis

Upload IFC metadata to generate an AI-powered summary.

UPLOAD IFC METADATA

ifc.metadata

GENERATE SUMMARY

Analysis Report

Here's a detailed analysis report based on the provided IFC model information:

Overall Building Analysis

The project appears to be a large-scale construction with 22 floors, indicating a mid to high-rise structure. However, several critical pieces of information are missing or inconsistent, which raises concerns about the completeness and accuracy of the IFC model.

Key Observations

- The model is using IFC version 4, which is the current industry standard.

Key Deliverables:

- IFC Summary
- Metadata Check
- Feature Highlights
- Error Report
- Dashboard
- Export Reports
- AI Query

Technologies

AI-Powered Regulations Expert

We provide AI-powered regulatory guidance for BIM projects, creating a smart knowledge base that answers compliance queries instantly, reducing manual effort and ensuring accurate insights.

Demo Video: [Click here](#)

Key Deliverables:

- Knowledgebase
- Query AI
- Compliance Check
- Document Parsing
- Recommendations
- Dashboard

Technologies

AI-Driven Property Measurement & Analysis

This solution automates the extraction of critical property data such as area, volume, and dimensions from building models or CAD/BIM files. By leveraging AI, it ensures accurate calculations, faster analysis, and reduced human error, helping real estate developers, architects, and construction teams make informed decisions quickly.

Demo Video: [Click here](#)

Key Deliverables:

- Area Insights
- Volume Metrics
- Dimensions
- Error Detection
- Automated Reports
- Workflow Efficiency
- Accurate Analysis

Technologies

AI-Powered Car Dent Detection & Pre-Inspection System

We developed an advanced AI solution for motor insurance companies to automate vehicle inspection and reporting. The system uses computer vision to detect dents, scratches, and damages from car images or videos, generating instant pre-inspection and damage assessment reports.

This AI-driven solution streamlines claim processing, reduces manual inspection time, and enhances accuracy in damage evaluation — helping insurers make faster, data-backed decisions.

Key Deliverables:

- AI model trained on real car damage datasets
- Automated pre-inspection and claim assessment reports
- Dashboard for insurers to review and validate results
- Integration-ready APIs for insurance platforms

Technologies

AI Banknote Intelligence

Developed for auction houses to identify and catalogue vintage paper money from multiple countries. Universal Recognition: One model (MobileNet-V2/YOLO) for 112+ denominations and front/back faces.

Authenticity: AI-based paper fiber analysis and micro-feature matching for counterfeit detection. Status: Feasibility confirmed leveraging BankNote-Net foundation.

Key Deliverables:

- Grading: Automated condition grading (VF → UNC) by detecting folds, wear, and ink density.
- Rarity Index: Real-time lookup for scarcity based on historical note coverage and catalog databases.
- Market Pulse: Pulls recent sales data from eBay/Heritage auctions to display estimated price bands.

View Smart Windows – IoT & Mobile App Solution

Developed the IoT and mobile app powering View Dynamic Glass, enabling residents to intelligently control window tint for comfort, glare reduction, and energy efficiency. The app supports instant control, room-based schedules, automatic tinting based on outdoor conditions, custom scenes, and real-time performance monitoring—helping create healthier, smarter, and more sustainable buildings.

Demo Video: [Click here](#)

Key Deliverables:

- IoT Integration
- Mobile App
- Smart Tinting
- Automated Controls
- Scheduling
- Real-Time Monitoring
- Energy Optimization
- User Comfort
- Smart Buildings

Technologies

IoT Vending Solutions: DMVI

Smart Vending Machine

Modernizing Vending Operations

Collaborated with Digital Media Vending International to enhance hardware with IoT-enabled solutions for real-time monitoring and control.

STRATEGIC GOAL

Improve operational efficiency and enable predictive maintenance across wide-scale vending deployments.

Key Components & Technology - IoT Vending Solutions: DMVI

Key Deliverables:

- IoT-Enabled Vending Machines
- Remote Monitoring & Control
- Real-Time Machine & Sales Tracking
- Automated Inventory Management
- Predictive Maintenance System
- Instant Fault & Low-Stock Alerts
- Centralized Dashboard & Analytics
- Secure Payment & Sensor Integration
- Scalable Architecture for Multiple Models
- Reduced Downtime & Operational Costs

Technologies

Satellite QA Agent

We developed an AI-powered geospatial validation system that automatically assesses satellite imagery quality before it enters analytics or planning workflows. The solution detects unusable data such as cloud interference, distortion, and exposure anomalies, generating structured reports that ensure only reliable imagery is used for downstream analysis, modeling, and decision-making across government and infrastructure programs

Key Deliverables:

- Automated satellite image quality assessment
- Detection of unusable imagery and anomalies
- Image-level analytical reports
- Dataset optimization for geospatial AI workflows

Technologies

AI-Powered **Employee Engagement** System

Built an AI-powered employee engagement system integrating CCTV-based facial recognition, real-time mood detection, and automated attendance tracking with HRMS. The solution enhances workplace engagement through personalized greetings and actionable employee insights.

Key Deliverables:

- AI-based facial recognition integrated with office CCTV
- Real-time emotion detection and mood analytics
- Automated attendance syncing with HRMS
- Personalized audio greeting system
- Cloud-based infrastructure for scalable deployment

Technologies
